Covering everything from processing steps to models to high level circuit design issues, the authors make it a point to emphasize the "real-life" implications of this material for the circuit designer as a professional. This text presents a concise treatment of the wide array of knowledge required for integrated circuit design. Emphasis on the most important and fundamental principles in creating state-of-the-art analog circuits. Coverage includes contemporary topics such as dynamically matched current mirrors, digital error correction and interpolation, and folding D/D converters. Year: 1,997 City: New York Pages: 712 Pages In File: 712 Language: English Topic: 250 Library: mexmat Issue: 24 Identifier: 9780471144489,0471144487 Ddc: 621 Lcc: TK7874 J65 1997 Org File Size: 23,018,801 Extension: pdf Tags: Приборостроение Электроника DAVID JOHNS and KEN MARTIN , Univ. of Toronto ISBN: 0-471-14448-7, 706 Pages, Cloth, 1997 In Canada, call 1-800-567-4797 in the USA, call 1-800-225-5945 This book is intended for use as a senior or graduate level textbook and as a reference for practicing engineers. For classroom use, the chapters have intentionally been made mostly independent so that some chapters can be covered while others are skipped. Such flexibility is essential in presenting textbooks for the later years of study. For reference use, this book is intended to rapidly increase a practicing engineer's knowledge of modern analog circuit design. Much of the material was originally taught and refined, over many years, in popular industrial short courses. For this audience, the most important design considerations have been highlighted and modern design examples are included throughout. Emphasizes CMOS analog circuit design rather than bipolar design. Inclusion of SPICE simulations in the early design chapters. Click here for CMOS models used for simulations. Coverage of circuits not found in many books such as comparators, sample-and-holds and voltage references. Comprehensive coverage of A/D and D/A converters including oversampling approaches. Includes many modern issues such as fully-differential techniques, analog layout, and dynamic-range measurement. Modern coverage of phase-locked-loops including the popular charge-pump approach. Over 250 problems and a solutions manual available. It provides thorough coverage of the design and testing of high-performance analog circuits. Tony Chan Carusone completed the B.A.Sc. and Ph.D. degrees at the University of Toronto in 1997 and 2002 respectively, during which tme he received the Governor-General's Silver Medal. Since 2001, he has been with the Department of Electrical and Computer Engineering at the University of Toronto where he is currently an Associate Professor. From 2002 to 2007 he held the Canada Research Chair in Integrated Systems and in 2008 was a visiting researcher at the University of Pavia. He is also an occasional consultant to industry, having worked for Snowbush Inc., Gennum Corp., and Intel Corp., all in the area of high-speed links. Tony was a co-author of the best student papers at both the 2007 and 2008 Custom Integrated Circuits Conference and the best paper at the 2005 Compound Semiconductor Integrated Circuits Symposium. He is an appointed member of the Administrative Committee of the IEEE Solid-State Circuits Society, a member and past chair of the Analog Signal Processing Technical Committee for the IEEE Circuits and Systems Society, and a past member and chair of the Wireline Communicatons subcommittee of the Custom Integrated Circuits Conference. He has served as a guest editor for both the IEEE Journal of Solid-State Circuits and the IEEE Transactons on Circuits and Systems I: Regular Papers, and served on the editorial board of the IEEE Transactons on Circuits and Systems II: Express Briefs from 2006 until 2009 when he was Editor-in-Chief.
